

Zoé Massida

I did my PhD in Neurosciences and then found my place in project management. I am now a research engineer at the CNRS/IRAP, working as European Project Manager, notably on the XMM2ATHENA project.

Coming from a completely different scientific field, I am very happy to to be introduced to astrophysics. This project is fundamental for the further development of ATHENA and for the continuity of XMM-Newton, and it also allows to involve new generations of researchers in these projects.

I am the leader of Work Package 1, which is the management part. My main tasks are to coordinate the XMM2ATHENA project and the European institutes involved, to maintain the schedule and to prepare the periodic/final reports.

Organization: Institut de Recherche en Astrophysique et Planétologie (CNRS/IRAP)
Position: **WP1 leader.**
European Project Manager at IRAP/CNRS
